“Technology with Integrity”

www.toriangroup.com

September 2022

**Windows 11** 2022 (22H2) is expected on Sept. 20<sup>th</sup>. This is the first major update to Windows 11.

[New features](#) include:

[File Explorer has tabs](#) similar to a web browser and more integration with OneDrive;

More flexible start menu;

The ability to drag and drop to the taskbar (as in Windows 10).

**Windows 10 20H2 (November 2020 release)** is no longer supported. Versions 21H1 and 21H2 are the [currently supported versions](#). It is a free upgrade. You can check your version by typing WINVER in the search bar.

[Windows 10 22H2](#) will be released later this year. No significant new features are expected.

While **Windows 10** will continue to receive updates, the interesting new features will go to **Windows 11**.

[Microsoft is pushing everyone toward MS Office subscriptions](#).

Office 2016 & 2019 won't be supported for connecting to Microsoft 365 services, including Exchange Online email, starting Oct 2023.

**Microsoft** will [disable Exchange Online basic authentication](#) for email starting October 1st.

As mentioned last month, some older printer/copiers may stop sending scans via email if configured to use older email authentication standards.

Hackers can steal clear text credentials from apps using basic authentication via several tactics, including social engineering and info-stealing malware.

[QuickBooks 2023 released](#) on Sept 6<sup>th</sup>. [Prices have gone up](#) on all versions.

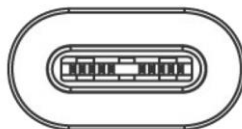

Desktop editions are now available only as a subscription, which must be renewed annually. They are pushing customers toward QuickBooks online, [which also went up in price](#).

## USB Standards

Most new laptops come with only USB-C adapters. The USB-C adapters have rounded edges and plug in with either side on top. These are also used on newer phones.

USB-C

USB-3

To use an older USB device, you will need a USB-C to USB2/3 adapter or docking station.

Not all USB-C cables and ports are the same, and not all older USB ports are the same.

[This article](#) has an excellent summary of the various standards and what can be interconnected.

USB4 Gen3 is the latest standard, which uses a USB-C connector. [USB4 3.2](#) will be out next year.

[iOS 12.5.6 released](#) - primarily a security update.

[iPhone 14](#) release event is Sept. 7

Microsoft Outlook has been [shutting down after launch](#) and/or [requesting a password](#) for some users. This was due to problems with the Microsoft email servers and some updates.

Amazon [acquires iRobot Roomba](#) for \$1.7B.

## ECONOMY

[Tech Layoffs In 2022](#): The U.S. Companies That Have Cut Jobs.

Intel blamed a [10 percent drop in PC sales](#) for its sudden and rapid decline in revenue, noting that the poor economy had compounded the previous supply chain issues.

[Microsoft is the latest tech giant to report decelerating advertising revenue.](#)

[New semiconductor law](#) aims to create 'Silicon Valleys' across the U.S. \$10 billion in funding will go to support 20 research hubs.

[China's Chengdu to lock down millions over COVID outbreak \(again\).](#)

Toyota to [hike the price of steel supplies](#) for parts makers by up to 30%.

The risk of a [California megaflood](#)  
Climate change is likely increasing the risk of extreme precipitation events in California and of subsequent severe flood events...transforming the interior Sacramento and San Joaquin valleys into a temporary but vast inland sea nearly 300 miles in length.

The summer's biggest [climate disasters](#), seen from space.

## SECURITY

[More than 20 vendors are using a vulnerable Realtek chip in their network routers](#), such as Tenda, Nexxt, Intelbras, D-Link, and others.

The chips supplied by Realtek are used by almost all well-known manufacturers and can be found in VoIP and wireless routers, repeaters, IP cameras, and smart lighting controls. Realtek addressed the issue in March, [noting](#) that it affects rtl819x-eCos-v0.x series and rtl819x-eCos-v1.x series. An attacker only needs the external IP address of the vulnerable device. This is actively being exploited. Exploitation is silent and requires no interaction from the user. Each vendor will need to release a firmware update for their device – they are not available yet.

[CVE-2022-27255 detail](#)

[Realtek advisory](#)

[SANS article](#)

[Vulnerability in Cisco RV series routers.](#)

Multiple vulnerabilities in Cisco Small Business RV160, RV260, RV340, and RV345 Series Routers could allow an unauthenticated, remote attacker to execute arbitrary code.

The [RV340](#) and [RV345](#) firmware updates resolve this problem.

We recommend replacing routers prior to the RV340/345 – there is no patch available.

[Vulnerabilities in Foxit](#) PDF Reader and PDF Editor - update [here](#).

[Google fined \\$60 million](#) over Android location data collection.

[MailChimp breach](#) exposed **DigitalOcean** web hosting customer email addresses.

[Twilio breach](#) let hackers gain access to **Authy** 2FA accounts.

[DoorDash discloses new data breach](#) tied to Twilio hackers.

[Plex data breach](#).

[LastPass data breach](#).

No user passwords were compromised.

[PayPal Phishing Scam](#) uses invoices sent via PayPal.

If you [follow these rules](#), you will not have to be as worried about data breaches:

1. Always use a long passphrase.
2. Never reuse a password.
3. Always turn on 2-factor authentication (2FA), if possible.

## HUMOR

We were able to reduce the cost of network device monitoring. Starting in October, routers/firewalls will now be \$6.00/Month and managed switches will be at no additional charge.
